Ahmadabad, India | kushaldalasaniya2930@gmail.com | +91 96388 67037 | <https://kushaldalasaniya.in/linkedin.com/in/kushal-dalasaniya> | github.com/Kushal-Dalasaniya

Summary

Experienced Software Development Engineer with a strong background in building scalable backend systems, optimizing fintech processes, and enhancing blockchain applications. Proficient in Go, Rust, Java, TypeScript, Spring Boot, and Node.js, with experience in Ethereum, ICP, MEV systems, distributed systems, and microservices. Adept at integrating APIs, optimizing system performance, and contributing to open-source projects. Passionate about building high-impact, decentralized, and permissionless blockchain technologies.

Experience

Software Developer - LLM (Contract), Turing – Remote Nov 2024 – Present

- Contributed to the training and enhancement of **AI models** for **industry leaders, including Google and OpenAI**, focusing on **accuracy, relevance, and performance**.
- Trained extensively in AI development using Java, Spring Boot, advanced multithreading, and various other Java-related technologies.
- Enhanced **AI model performance** by developing and optimizing backend systems using **Reinforcement Learning from Human Feedback (RLHF)** and **Supervised Fine-Tuning (SFT)** methodologies in Java.
- Designed and maintained robust RESTful APIs and microservices, ensuring scalable and efficient integration of AI-driven features.
- Collaborated with cross-functional teams to incorporate innovative AI solutions into enterprise applications, improving overall system efficiency and user experience.
- Emphasized best practices in code development, testing, and deployment to consistently deliver high-quality software solutions.

Software Development Engineer, Peerbits/Digipay – Ahmedabad, India Dec 2023 – Jan 2025

- Designed and led** the integration of a framework for a payment gateway microservices architecture to **incorporate 20 payment entities within 20–25 days**, successfully managing the integration team.
- Implemented the **Luhn Algorithm** for account/PAN number validation and generation, ensuring data accuracy and integrity.
- Developed a **bulk payment** upload system via spreadsheets, streamlining high-volume payment processing.
- Utilized **Apache Kafka** for seamless communication between microservices, promoting scalability and efficiency.
- Leveraged **MySQL** and **MongoDB** for robust and efficient data handling.
- Implemented the **ISO 8583 (1987)** protocol to enable flawless communication with banks, using the JPOS library to decode messages and unpack fields efficiently.
- Designed and implemented **session management and variable device limits** to improve user security.
- Worked with **Elastic Search and Kibana** for effective log management and data visualization.
- Developed a framework to streamline and accelerate client onboarding for **SaaS-based fintech products, reducing onboarding time by 30%**.
- Redesigned the bank-to-bank** transfer process by prioritizing using same-bank APIs, **reducing transaction costs by 40%**, and improving reliability.

Software Engineer, Infosys – Pune, India Dec 2021 – Nov 2023

- Developed REST APIs in a **distributed environment** across multiple **microservices** and use a **three-layer architecture** (BFF, BU, and DB).
- Backend-driven dynamic filters** for many features eg workspaces, reservations
- Filter, sort, and paginate** data based on selected filters for multiple features by executing **SQL queries** on the backend.

- Backend-driven dynamic filters for multiple features.
- Implement the **Export** operation on different screens and export dynamically filtered data to an Excel file.
- Implement **unit testing** and mocking with **Mockito** and **JUnit** to increase the coverage of the application.
- Evaluation and migration of **authentication mechanisms**, e.g., JWT.
- Use **DevOps** tools to automate build, test, and deployment processes using **Bamboo** and **GitLab**.

Block Chain Developer, Freelancer – Remote

Jan 2021 – Nov 2021

- Developed features for automatic top-up of user canisters' cycles on the Internet Computer Protocol (ICP) blockchain, enhancing computational and storage capabilities.
- Implemented a user interface to update canister controllers, improving user control and management. Utilized Motoko, DFX, and ReactJS to ensure the scalability, security, and efficiency of blockchain systems.
- Gained deep understanding of smart contracts, decentralized applications, and the intricacies of canister management.
- Demonstrated ability to tackle complex challenges in blockchain development through hands-on experience with ICP.

Open Source Contributions

I actively contribute to the open-source community to enhance and support widely used technologies. Below are some of my key contributions:

- **ElasticSearch**: Contributed to improving search capabilities and fixing issues in one of the most popular distributed search engines. [View Contribution](#)
- **Micronaut**: Enhanced functionality and resolved bugs in this lightweight, Spring Boot alternative framework for Java. [View Contribution](#)

These contributions reflect my commitment to collaborating on open-source projects and my ability to work with complex, real-world systems.

Education

L.D. College Of Engineering, Bachelor of Engineering

Jun 2017 – Jul 2021

- GPA: 8.42/10

V.P. GHETIYA HIGH SCHOOL, Class 12 (State Board)

Jun 2015 – Jul 2017

- Percentage: 87

Technologies

Programming Languages: Go, Rust, Java, TypeScript, JavaScript, C++

Frameworks : Spring boot, React.js

Databases : MongoDB, MySQL, PostgreSQL, Elastic Search

Cloud : AWS, EC2, S3 bucket

TOOLS : Git, Postman, Linux, Docker, Kubernetes

BLOCKCHAIN TOOLS : Motoko, Solodity, Remix, Geth, DFX, Hardhat, Motoko playground
